

EUR 9.1, Avotus' Unified Communications and Reporting tool enhanced with IM logging facility.

Mississauga, Ontario – April 17, 2018 - Avotus Corporation, the leading provider of intelligent communications management (ICM) solutions, today announced that it has released significant enhancements to its Unified Communications and reporting tool. Enhanced Usage Reporting (EUR 9.1) provides communications managers with greater visibility into the full suite of UC features with one unified tracking and reporting platform.

“We feel our newest EUR release is well timed, based on the PCI Data Security Standard compliance target date of June 30, 2018”, said Avotus CEO Jayraj Chheda. Data security is part of Avotus' core strategy and its alignment with various standards is reflected in the people, technologies and processes it employs. EUR 9.1 utilizes TLS 1.2 for organizations seeking compliance with PCI Data Security Standards.

The EUR platform is designed to help provide administrators and analysts with complete visibility into communications activities that encompass voice, video, IM and conferencing, as well as compliance reporting that includes IM keyword searches and automated reports in a variety of formats.

EUR's tracking and exception reporting across multiple platforms including unified communications, VoIP, and legacy PBX can help detect abuse and maintain compliance with corporate guidelines and regulatory requirements
